

Student Complimentary Lens Program

Program description

The **Student Complimentary Lens Program** provides optometry students with a 6-month supply of CooperVision lenses during each year of their optometry school education. This program is designed to familiarize students with a variety of CooperVision products.

How the program works

To obtain a supply of contact lenses from CooperVision, students must have an eye examination and contact lens fitting at the school clinic. Upon completion of all necessary follow-up, they will obtain a valid contact lens prescription. At that time, they may order a complimentary 6-month supply of the prescribed CooperVision lenses per academic year. Students may only order one 6-month supply of any CooperVision brand. If they would like a 6-month supply of lenses in consecutive years, they must be fit for a different CooperVision product.

Complimentary contact lens supplies must be requested through the proper administrative channels at the school and then ordered directly from CooperVision. Orders should not be placed through the school's contact lens distributor.

Who is eligible?

All optometry school students are eligible for one 6-month supply annually of CooperVision contact lenses during each year of their optometric education. Residents and faculty are not able to participate in this program.

Program dates

Students are able to fill their prescription after completing the fitting process for each lens type.

Enrollment process

Contact the clinic administrators to schedule an appointment.

Payment / application / request process

Lens orders must be placed via email at coopervisionorders@coopervision.com through the Contact Lens Department Administrator who is responsible for placing contact lens orders at each school.
